

DEVELOPMENT HARDWARE ENGINEER

ATAC is a small manufacturing company specializing in providing analytical instrumentation to the Oil Refinery, Petro-Chemical and other related industries.

Established in 1993 to serve the UK process market. Expansion internationally has seen growth in ATAC and with our reputation within this sector. Our internationally renowned product range includes Hone, Hallikainen and Sysco.

We now require a development engineer to join a small team developing our next generation of analysers.

This will be a hands-on position role in which will enable the right person to develop their R&D skills. Future leadership is a distinct possibility for the right person.

The position will involve designing and prototyping improvements to electronic circuits, embedded software, industrial computer networks and analyser measurement systems. The successful candidate must be highly motivated and be able to work in a team. He or she will report to the Engineering Manager.

Qualifications:

Minimum HNC/HND/Degree in Electronic Engineering with some industrial experience. MSc/Phd would be preferred.

Experience:

All round experience in analysers, electronic circuits, computer programming, and a general knowledge of computer operating systems. Experience with AutoCAD would be an advantage.

Location:

The position is at ATAC's Operations and Manufacturing facility near Devizes Wiltshire.
