

Job Description for Field Service Engineer

- Location:** Market Lavington or working from home
- Qualifications:** BSc or HNC (in a scientific discipline) plus 5 years experience in analytical instrumentation
- Duties:** Field service work in UK and overseas, on our own and other manufacturer's process analyser and systems. Work will be varied, depending on requirements, but would include the following disciplines:
Installation, commissioning, routine servicing, customer training, call-out visits
- In addition, you may be required to work at our Market Lavington facility, where duties may include production engineering, R&D or working in the test department.
- Skills:** Hands-on knowledge of process analysers and systems
Understanding basic chemical engineering
Good communication skills
Ability to work as a team member
Ability to work on own initiative
Good at organizing own time and collating and writing reports
Able to travel overseas for periods up to 4 weeks
- Personality:** ATAC place a high value on self-motivation, flexibility and the ability to either alone work in a team
